# Online Certificate Course in FINANCIAL MODELING

## About Financial Modeling

A model is a representation of real-world situations. Financial modeling is preparation of a simplified version of a real-life financial situation in MS Excel. A financial model takes inputs of raw data like fundamentals of corporates, foreign exchange rates, interest rates, etc. and converts it into meaningful financial statements and reports. A financial modeler's job is to build financial models. A model contains numerical calculations using MS Excel. This enables us to prepare projected financial statements and reports to take better business decisions.

## How to apply?

Interested candidates should transfer Fees of Rs.3540 (incl. 18% GST) by NEFT / IMPS to following SIESCOMS Bank Account Information on or Before 30th September 2020. Admission will be on a First Come First Serve basis.
